ECCO RINSE

DESCRIPTION

ECCO RINSE is an effective, economical drying and rinse agent. It is best used when automatically dispensed via injector to the final rinse line. Product reduces rinse water surface tension allowing for superior spot-free drying. Product is effective on silver, flatware, china, glassware, and plastic.

DIRECTIONS

ECCO RINSE is most effective when used in rinse water between 180° and 195°F. Lower temperatures will inhibit activation of the drying agent, while temperatures above 200°F will cause evaporation and clouding. Rinse aid injector is set depending on conditions and desired results; however, 1 - 2 ounces of **ECCO RINSE** is generally effective for 100 gallons of rinse water. Consult your local Pariser representative for specific use procedures.

HANDLING

ECCO RINSE is slightly acidic and may be mildly irritating. In case of contact with skin, rinse liberally with water. For eyes, continue flushing and if irritation persists, get medical attention.

ECCO RINSE should be stored at room temperature. Avoid freezing.

PACKAGING

ECCO RINSE is provided in handy 4x1 gallon cases, and 5 gallon containers.
