### **GE-SUPREME**

#### **DESCRIPTION**

**GE-SUPREME** is a non-silicone based dry cleaning detergent that was designed for economy, versatility, and compatibility with silicone based dry-cleaning solvent systems. **The product** incorporates anionic and nonionic ingredients as well as a citrus based degreaser to insure superior grease and oil dispersion. Additionally, a state-of-the-art anti-static component has also been added to the formula to mitigate electrical charge and resultant lint and handling issues. The product was designed for use in “injection system” dry cleaning applications where controlled and balanced moisture content is required.

#### **APPLICATION**

**GE-SUPREME** enables the Professional Dry Cleaner utilizing silicone based solvent to provide its customers with highly effective cleaning results over a broad spectrum of fabrics and stain types, producing exceptional cleaning with minimal pre-spotting and re-processing.

**GE-SUPREME** leaves finished garments smelling fresh and clean, and provides a supple “hand” and garment drape.

#### **USAGE**

**Injection:** **GE-SUPREME** is injected at a rate of 1 to 1.5 ounces per 10 lbs. of cleaning batch size.

#### **PACKAGING**

**GE-SUPREME** is packaged in 5 gallon pails and 15 gallon drums.
