

Technical Product Bulletin

INK OUT

INK OUT is the spotting product of choice for the general removal of most ink and many oily-type stains (crayon, grease, tar). It has direct application on the spotting board, allowing for minimal product usage and the ability to remove stains without costly and time-consuming recleaning.

Directions

Fabrics:

1. Before spotting unfamiliar material, always test a seam inside of the garment for the colorfastness of the dye.
2. Sparingly apply INK OUT directly on the stain and tamp with a brush or work lightly with a bone scraper until the stain disperses. It may be helpful to place a piece of terry behind the garment to soak up any fugitive ink.
3. Rinse thoroughly using cold water (distilled water if the material is the type that will water spot) and vacuum the garment.
4. To protect the color and to prevent the stain from setting, do not rinse with steam. Once the stain is completely gone, you may feather dry with an air gun.
5. If the stain is not entirely removed or slow to disperse, repeat the above process before using an air gun to dry.
6. For heavy deposits of ink, apply INK OUT liberally and absorb with a blotter or Turkish towel to prevent ink from spreading while working with a brush or bone scraper.

Packaging

INK OUT is available in 6x1-pint cases.
