SMART RINSE

DESCRIPTION

SMART RINSE is a highly concentrated, high temperature drying and rinse agent. It is best used when automatically dispensed via injector to the final rinse line. Product reduces rinse water surface tension allowing for superior spot-free drying. Product is effective on silver, flatware, china, glassware, and plastic.

DIRECTIONS

SMART RINSE is most effective when used in rinse water at 18-20 PSIG, and at temperatures between 180° and 185°F. Lower temperatures will inhibit activation of the drying agent while temperatures above 190°F will cause evaporation and clouding. Rinse aid injector is set depending on conditions and desired results; however, 1 - 2 ounces of **SMART RINSE** is generally effective for 100 gallons of rinse water. Consult your local Pariser representative for specific use procedures.

HANDLING

SMART RINSE is slightly alkaline and may be mildly irritating. In case of contact with skin, rinse liberally with water. For eyes, continue flushing and if irritation persists, get medical attention.

SMART RINSE should be stored at room temperature. Avoid freezing.

PACKAGING

SMART RINSE is provided in handy 4x1 gallon cases, and 5 gallon containers.
