### SILKY

#### DESCRIPTION

**SILKY** was designed to be used as an aid in the pre-spotting process, both as a Silk Spotter, and as a general Leveling Agent for moisture sensitive fabrics. The product is safe and effective on a wide range of fabrics to include silk, linen, gabardine, rayon, cotton and wool.

#### BACKGROUND

Silk fabric is highly susceptible to issues when pre-spotting, and great care, and the right spotter is required to remove stains without damaging the fabric and or removing the dyes. Silky helps lubricate and emulsify oils and water present in this process allowing for excellent stain removal without causing dye removal or troublesome residual rings.

Proper pre-spotting practice differentiates good cleaning operations from lesser ones, and the use of steam and other chemistry on the spotting board requires use of a Leveling Agent to permit proper residual removal in the subsequent cleaning process.

#### Benefits:

- Excellent pre-spotter for silk and other fine fabrics.
- Can be safely applied to treated garments for re-clean.
- Leaves no residual ring or re-deposition stains associated with wet-side spotting/re-cleaning procedures.
- Compatible in perc and hydrocarbon solvent systems.

#### DIRECTIONS FOR USE:

**Pre-Spotting:** Apply **Silky** liberally to stained area, tamp with spotting brush and clean.

**Leveling:** Treat stained area with appropriate spotting agents, gently flush with water or steam if necessary. Apply **SILKY** to the treated area. Re-clean garment.

**Packaging:** **SILKY** is packaged in 4x1 gallon cases.
