Today's garment restoration specialists require answers to technical questions, innovative methodologies for cost-effective procedures, and a state-of-the-art systems approach to the safe and productive use of chemistry as a tool in the restoration process.

Pariser Industries has over 45 years of experience in providing chemical solutions, system approaches, and answers to the issues facing dry cleaners, institutional, and commercial laundries.

Dry-cleaning products

MID-CAP is a concentrated, coconut oil-based detergent and odor-counteractant specifically developed for the mitigation of organic-based odors in the textile/smoke restoration process. MID-CAP cleans and conditions fabrics while it deodorizes.

BUFF is a dry-cleaning solvent treatment additive designed to combat odors and the adverse effects of free fatty acids in the dry-cleaning system. BUFF also helps buffer solvent that has become destabilized due to constant distillation and provides significant anti-static capability.

P.O.G. is a dry-side paint, oil, and hydrocarbon stain remover highly effective in the removal of fire-related stains when added to the first bath (batch) of a two-bath system in perchlorethylene solvent systems.

TASKMASTER is an effective, multi-purpose stain remover formulated for use in both perc and hydrocarbon solvents. TASKMASTER is safe on most colors and fabrics.

Wet-cleaning products

WET-DETTE is a mild acidic-based detergent created specifically for wet-cleaning applications. This product has broad use for wet-cleaning or as a laundry detergent, and is compatible with all fabrics.

ULTRA heavy duty liquid laundry detergent is a unique mildly alkaline, concentrated detergent developed for washing durable press, polyesters, polyester-cotton and other hard-to-clean fabrics.

CEXP is a highly active odor-counteractant effective for the removal of smoke and organic-type odors.

HYDROCON is a finishing fabric conditioning agent for laundry and wet-cleaning applications where fabrics require a more relaxed and softer hand.

SHOT SPOT is an effective, highly-versatile all-purpose stain remover. The product can be used both as a pre-spotting agent for wet-cleaning and as an additive for cold washing to help in oil removals. It is also highly effective on a wide range of materials inclusive of carpets, upholstered fabrics, and linens.

CITRASOL is a concentrated blend of citrus terpenes, anionic and non-ionic biodegradable synthetic detergents, and fluorescent brighteners. This unique blend of surfactants and solvents is highly effective at removing heavy hydrocarbon based oils and greases found in fire damaged textiles.
