WCS™ Wet-Cleaning Systems

**HYDROCON****Description**

HYDROCON is a fabric conditioner and retexturizing agent formulated for professional wet cleaners to process textiles that require additional drape relaxation and a softer, supple hand. The product reduces static, improves stain resistance, and reduces pressing time. HYDROCON has been certified by the EPA's Safer Choice program as an environmentally-preferred wet-cleaning adjunct.

**Applications**

In laundry applications, HYDROCON is added to the final rinse operation of the formula. In wet-cleaning applications, it is added to the break or the final rinse. This product also works well on rayon and linen garments which are difficult to press after aqueous processing.

**Directions**

- **Wet-cleaning applications:** Add to the rinse cycle at a rate of 2–3 ounces per 10 gallons of water.
- **Laundry applications (commercial machines):** Add 4–6 ounces per hundredweight (cwt) to the final rinse operation.
- **Top-loaders:** Add 1/2–2 ounces to the final rinse compartment/operation.
- **Hand washing:** In clear water, add HYDROCON at the rate of 2 ounces per gallon of rinse water and mix thoroughly. Allow fabric to soak for 3–5 minutes and mildly agitate. Squeeze out garments (DO NOT WRING) and dry/press according to label instructions.

**Note**

The HYDROCON formulation is a unique suspension which may likely begin to stratify over time. Generally, a shelf-life of 90–100 days can be expected from this material; however, this can be longer or shorter depending upon local environmental conditions such as intense heat or freezing. Do not use the product if it has completely separated.

**Packaging**

HYDROCON is available in 4 x 1-gallon cases and 5-, 15-, and 55-gallon containers.
